Education Consultancy CRM

Scope

A CRM for a single study-abroad consultancy (one organization, no multi-tenancy).

Users:

- **Admin/Manager:** sees everything, manages users, universities, and reports
- **Counselor:** manages their own assigned leads and students
- **Front desk/Receptionist:** captures new inquiries and books appointments

The core idea: one clean flow, **Lead → Student → Application → Outcome**

MVP Features

1. **Auth and roles:** login, RBAC (admin / counselor / front desk) with permission matrix.
2. **Lead management:** add lead (name, contact, source, destination country interest, intake, test status), assign to a counselor, status pipeline (New → Contacted → Counseling Scheduled → Converted / Lost), list with search and filters. Should be able to add documents to each lead by the Counselor.
3. **Follow-ups and notes:** activity timeline per lead (calls, notes, meetings), follow-up tasks with due dates, "due today / overdue" view
4. **Lead conversion to student profile:** academic background, test scores (IELTS/SAT etc.), preferred countries and courses
5. **Document checklist per student:** passport, transcripts, SOP, etc., each with status (pending / received / verified) and file upload
6. **Application tracker:** a student can have multiple applications (university, program, intake, status: Draft → Submitted → Offer → Accepted / Rejected, deadline). Filter country > university > program > intake.
7. **University and program catalog:** simple admin-managed list used when creating applications
8. **Dashboard:** leads by status, conversions this month, leads by source, upcoming deadlines, tasks due.

9. **Accounts:** For handling office's accounts, like office rent, staff salary, etc.

Could Have

- Appointment calendar for counseling sessions
- Email notification on follow-up due dates
- CSV export of leads
- Kanban drag-and-drop view of the pipeline

Won't Have

Student portal, WhatsApp/SMS integration, payments and commissions, agent/partner management, multi-branch support, automation workflows. May be left as future work.

Tech Stack

React + Node/Express + PostgreSQL, with file uploads stored on local disk or a free object store.

Execution Plan

Week	Focus
1	Requirements doc (short SRS with user stories), ER diagram, wireframes for about 6 key screens, repo and project setup, auth and roles
2	Leads, follow-ups/tasks, activity timeline (backend and frontend)
3	Student profiles, document checklist, university catalog, application tracker
4	Dashboard, polish, seed data and demo script, testing, documentation, presentation
